Refer to 8179 when responding

March 11, 2002

Dr. Joseph M. Hahn
Lunar and Planetary Institute
3600 Bay Area Boulevard
Houston, TX 77058

Dear Dr. ~~Hahn~~: *Joe*

I have received two reviews of your revised manuscript, "*Clementine observations of the zodiacal light and the dust content of the inner solar system*" (MS#8179). These reviews recommend further revision of your work before it could be considered for publication in *Icarus*. Please indicate in a cover letter your response to the reviewers' remarks, either stating how you have changed the manuscript to follow their suggestions or giving your reasons for not doing so. A point-by-point response is required.

I am inclined to agree with Reviewer I's comments on the Oort cloud uncertainties; all you can estimate is a lower limit, surely?

Please indicate in detail how you respond to each point raised by the reviewers when resubmitting your manuscript. Failure to return a detailed response to the reviewers may result in processing delays. Please check your manuscript throughout to insure that it is formatted to *Icarus* style before resubmitting. Guidelines concerning *Icarus* style can be found at our web site: <http://icarus.cornell.edu>. We would appreciate it if you would submit your revised manuscript through our web site.

Sincerely,

Phil
